

Organizer Guide

Stonegate Golf Outing · running the event

1 / 3

Signing in

Go to jnssolutions.ai/golf/admin/ and tap **Continue with Google**. Use the Google account you were added under. There is nothing to set up and no password to remember.

If it won't let you in, it is nearly always the wrong Google account — phones sign you in as whoever used them last. Tap your picture, switch accounts, and try again. If that doesn't do it, call your JNS contact; don't spend the morning on it.

The five tabs

Tab	What it's for
Dashboard	Live status — scores entered, teams actively scoring, completion, and per-team progress.
Teams	Create foursomes, share their private links, edit rosters, reissue codes.
Scoring	Correct or enter any team's score, hole by hole.
Messages	Announcements to everyone or selected teams, plus a private thread with each team.
Access	Add and remove other organizers. Owners only.

Setting up teams

- 1 Teams** → **+ New team**. Enter the team name, the starting hole for the shotgun, and up to four players. The first player is treated as the captain.
- 2 The code is created for you**. It appears on the card immediately, in the form **CEDAR-EAGLE-472** — two words and three digits, built to be read aloud without being misheard. You never have to generate one by hand.
- 3 Send it**. **Share link** opens your phone's share sheet with the message already written, so you can send it by Messages, Mail or WhatsApp in one tap. **Copy**, **Email** and **Text** are there for a laptop.

The other buttons on a team card

Edit roster	Change the name, starting hole or players. The code is unaffected.
New code	Issues a fresh code and kills the old link immediately . Only use this if a code has gone somewhere it shouldn't — anyone already using the old link will be locked out until you re-send.
Delete	Removes the team, its players and all its scores. Asks first, and cannot be undone.

One code per foursome, shared by all four. Any of them can enter scores, and any of them can rename the team — the starting hole and roster stay yours alone. A code only ever reaches that team's card, so nobody can score for another team.

Say one thing to the captains. Players get their own two-page sheet, but the line that matters is on it: **open the link at home, on wifi, before you leave**. Signal at the course is patchy, and opening it once puts the course map on the phone.

During the round

Scoring corrections, announcements and support

2 / 3

Fixing a score

Scoring → pick the team → tap the hole in the grid → adjust with – and +. It saves immediately; there's no confirm step. Holes already scored are shaded, so a team's gaps are visible at a glance. Two buttons sit underneath. **Clear hole** puts one hole back to unplayed — not the same as setting it to 1, which still counts on the leaderboard. **Clear the whole card** wipes every hole, leaving the team, players and code untouched.

Worth having someone at the scoring table regardless — a flat phone or a team that never opened the link is the usual reason a card is missing.

What happens when two team-mates score at once

- **Different holes — both are kept.** Each hole is written on its own, so the captain entering the 7th and someone catching up the 5th don't overwrite each other.
- **Same hole — the last entry wins.** Usually right, since the second person is normally correcting the first.
- Every phone catches up within seconds; your corrections override whatever the team entered.

Announcements

Messages → write a heading and a message → choose **All teams** or **Pick teams** → send.

All teams	Posted publicly. It takes over every player's screen the moment they see it, and stays until they tap "Got it". Afterwards it stays on their Messages screen.
Pick teams	Delivered privately into just those teams' threads. Other teams never see it.

Posted announcements are listed underneath the composer with a **Remove** button — take one down when it stops being true, since "rain delay" reads badly an hour after play resumed.

Nobody's phone buzzes. There are no push notifications. Messages and announcements appear when a player has the app open, and are waiting with an unread badge when they next open it. For anything that genuinely can't wait, use the loudspeaker or the phone. Players are told the same thing.

Support threads

Each team has a private thread with the organizers. The **Messages** tab shows every team, including those who've never written, so you can start a conversation with any of them.

- A **red dot on the Messages tab** means at least one team is waiting on a reply — it's visible from any tab, so you don't have to keep checking.
- Teams waiting are highlighted in the list. Opening a thread clears it.
- Threads are private to that team. No team can see another's, and a player cannot send a message that appears to come from an organizer.

What players see that you don't

Three behaviours on the player side account for most of the questions you'll be asked. None of them is a fault.

- **Scores entered without signal say *Queued*.** They sit on the phone and send themselves when a bar comes back. A card that looks behind on your Dashboard is more often a phone in a dead spot than a team that has stopped scoring — give it until they reach higher ground before chasing them.
- **A JNS card appears after every third hole they complete.** It's the sponsor slot. It clears itself after seven seconds, has an × if they're impatient, and never interrupts a score mid-entry — it waits until the hole is done.
- **The app holds a Stonegate splash for about three seconds on every open.** That is deliberate, not a slow load.

Access, and the day itself

Adding organizers, a running order, and what to do when

3 / 3

Adding another organizer

Access → enter their email → choose **Administrator** or **Scorekeeper** → **Grant access**. They then sign in at `/golf/admin/` with Google using that exact address.

- **Nothing is emailed automatically** — send them the link yourself.
- The address must match their Google account exactly.
- Only **owners** see the Access tab at all. The owner list can't be changed from inside the app — that's deliberate, so nobody can quietly promote themselves. Ask your JNS contact to change it.

A running order for the day

When	Do this
Week before	Create every team with its starting hole. Send each captain their link and ask them to open it once and add it to their home screen.
Morning of	Check the Dashboard shows the right number of teams. Post a welcome announcement — it doubles as a test that announcements reach phones.
At the shotgun	Nothing to switch on. Scoring is open as soon as teams have their links.
During	Watch the Dashboard for a team stuck on zero — usually someone who never opened their link. Keep an eye on the Messages dot.
After	Leaderboard is final as soon as the last card is in. Fix any disputes from the Scoring tab.

Troubleshooting

A team can't get in	Confirm they have the current code — if anyone pressed New code , older links stopped working. Re-send from Share link .
A team's card is empty	They probably never opened the link. Enter their scores from the Scoring tab and sort the phone out afterwards.
A team card shows no code	Rare, but it happens. Press Generate code on that team and send the link again.
Leaderboard won't load	Almost always signal at the scoring table. Move, or wait a minute. The screen tells you what went wrong — read it before assuming the worst.
It says you're not an organizer	You're signed in as a different Google account from the one you were added under. Switch accounts and try again.
Wrong scores appearing	Any team-mate can score. Correct it from the Scoring tab; your entry wins.
Anything else	Call your JNS contact. Don't try to fix it from a phone on the 14th tee.

Two things that surprise people. There are no push notifications — anything urgent needs a phone call. And a shared code means any of the four can score, so if a card looks wrong, it is more often a team-mate than a bug.
